Profile

I am a highly motivated, creative problem solver with a broad-range of technical skills and disciplines. I am driven by a thirst for knowledge and possess a strong capacity for learning. I have a passion for technology with an emphasis on web, mobile and game software development. I am a serial-entrepreneur at heart and a natural born leader. These passions and skills are what attract me to a lifetime of continued education.

Experience

AJ Media Group

2010 - PRESENT

My development roots were founded in developing 3-D levels for online video games, eventually growing to an online community. That propelled me to develop professional business services including multimedia, websites, graphics and video. With the knowledge learned in development, sales, marketing and business process, I started AJ Media Group, a venture into development and sales of mobile applications for the Apple iPhone with an emphasis on gaming. As of April 2011, there have been over 50,000 downloads from more than 20 countries of my mobile applications from the Apple iTunes Store. New product releases include a full-featured physics-based puzzle game that is also available for tablet devices in high-definition including Android.

Freelance

2007 - 2010

I worked independently on various creative projects ranging from designing logos to video production/editing for companies located both locally and abroad. This work was mainly comprised of web and database development related work.
